

- Keep Version as 1.0
- Increase Build from 1 to 2

Because your app has not been released yet, you usually do not need a new App Store version number. You just upload a new build for the existing 1.0 version.

In Xcode

1. Open the project target for Tendora.
2. Select the Tendora app target.
3. In General:
 - Set Version to 1.0
 - Set Build to 2
4. Select Any iOS Device (arm64) or a generic iPhone/iPad destination.
5. Go to Product > Archive.
6. Wait for the archive to finish and for the Organizer window to open.
7. In Organizer, select the newest archive.
8. Click Distribute App.
9. Choose App Store Connect.
10. Choose Upload.
11. Keep the default signing choices unless Xcode shows a specific issue.
12. Complete the upload.
13. Wait for Apple to process the build in App Store Connect. Apple notes the build must finish processing before it appears for selection.

In App Store Connect

1. Open your app record.
2. Go to the iOS app version you already created, likely 1.0.
3. In the Build section, select the new processed build.
4. Review:
 - Description
 - Keywords
 - Support URL
 - Privacy Policy URL, if required in your setup
 - Screenshots
 - App Privacy
 - Age Rating

- App Review Information

5. In App Review Information, explain the fix clearly.

Use something like:

“Resolved the first-launch onboarding issue that could appear non-responsive. The onboarding flow now shows a clear ‘Get Started’ button on the initial screen. We also improved persistence stability for newly created local data and added explicit save handling.”

6. Click Add for Review.

7. Then click Submit for Review.

Important current requirement

As of April 28, 2026, iOS and iPadOS apps uploaded to App Store Connect must be built with the iOS/iPadOS 26 SDK or later.

What I recommend for your case

- Do not create 1.0.1 unless App Store Connect forces you to.
- Submit 1.0 (2).
- In review notes, mention both fixes:
 - onboarding now has a visible button on first launch
 - startup/new-data stability was improved

If you want, I can next give you:

1. the exact text to paste into What's New
2. the exact App Review Notes
3. a final pre-submit checklist for this build
